--- SIMILARITY: Belongs to the PMP outer membrane protein family.
---- CAUTION: Ref.4 and Ref.5 sequences differ from that shown due to frameshift in position 673.
                                                                                                                                                MEDLINE-20150255; PubMed=10684935; DOI=10.1093/nar/28.6.1397;

Chlamydia trachomatis. WO9917741-A1 15-APR-1999.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                             The invention relates to an isolated Chlamydia species high molecular weight (HMM) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HWM proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and disagnosis. The present sequence represents a C. trachomatis HMM protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

The present invention relates to a new gram-negative bacterial bleb presenting on its surface the PorB outer membrane protein from Chlamydia trachomatis, or a protective antigen from C. preumoniae. The invention is useful for preventing C. trachomatis or C. pneumoniae infection in a host. The present nucleic acid sequence represents a Chlamydia trachomatis gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADGCAAACGTCTTTCCATAAGTTCTTTCTATGATGTTCTAGCTTATTCTTGCTGCTCT 441

The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide acid comprises any of 131 fully defined amino acid or nucleotide defined to the inclusion of the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament or prevention of infection due to Chlamydia (trachomatis The infection is treated or prevented by the medicament crandomary body, or for neutralising C. trachomatis elementary bodies, clementary body, or for neutralising C. trachomatis elementary bodies, chence the immunogenic composition can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions can be used activity. This sequence represents one of the immunogenic properties of the
                                                                                                                                                            New immunogenic composition having a protein or encoding nucleic acid, useful for diagnosing, preventing and/or treating Chlamydia trachomatis infection.
                                                                                                                                                                                                                     SEQ ID NO 93; 164pp; English.

protein or mucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide sequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament for the treatment or prevention of infection due to Chlamydia trachomatis. The infection is tracted or prevented by the medicament cliciting an immune response which is specific to a C. trachomatis clementary body, or for neutralising C. trachomatis elementary bodies, hence the immunogenic composition can be used in creating a vaccine. The immunogenic composition can be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the diagnosis of compositions have antibacterial activity. This sequence represents one of the 111 C. trachomatis proteins with immunogenic properties of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1041
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   501

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide acid comprises any of 131 fully defined amino acid or nucleotide acid or the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament or prevention of infection due to chlamydia trachomatis. The infection is treated or prevented by the medicament crachomatis and in the medicament claiminogenic compositions which is specific to a C. trachomatis allowed the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions have antibacterial activity. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the

```
The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide acid comprises any of 131 fully defined amino acid or nucleotide acid comprises any of 131 fully defined amino acid or nucleotide dequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament corporatis. The infection is treated or prevented by the medicament eliciting an immune response which is specific to a C. trachomatis clementary body, or for neutralising C. trachomatis elementary bodies, chemically and infection can also be used in creating a vaccine. The immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions compositions and activity. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         501

셤 Š 셤 ò g 8 8 ò g ઠે 성 유

The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid acid comprises any of 131 fully defined amino acid or nucleotide acid or the sequences given in the specification, or has 50% or greater sequence identity to it, or thair fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament or the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament eliciting an immune response which is specific to a C. trachomatis clementary bodies, hence the immunogenic composition can be used for the diagnosis of C. Immunogenic composition. The nucleic acids of the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions compositions acrows an activity. This sequence represents one of the infinite or the infinite compositions compositions with immunogenic properties of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide sequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament for the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New immunogenic composition having a protein or encoding nucleic acid, useful for diagnosing, preventing and/or treating Chlamydia trachomatis

eliciting an immune response which is specific to a C. trachomatis elementary body, or for neutralising C. trachomatis elementary body, or for neutralising C. trachomatis elementary bodies, hence the immunogenic composition can be used in creating a vaccine. The immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions compositions have antibacterial activity. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the

The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide acquences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament or prevention of infection due to Chlamydia (or the treatment or prevention of infection due to Chlamydia (trachomatis). The infection is treated or prevented by the medicament clament ary body, or for neutralising C. trachomatis elementary bodies, hence the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can be used an also be used in creating a vaccine. The compositions have antibacterial acityty. This sequence represents one of the 131 C. trachomatis proteins with immunogenic properties of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New immunogenic composition having a protein or encoding nucleic acid, useful for diagnosing, preventing and/or treating Chlamydia trachomatis infection.
                                                                                   Chlamydia trachomatis; immune; vaccine;

protein or nucleic acid, and an adjuvant, where the protein or nucleic acid, and an adjuvant, where the protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide sequences given in the specification, or has 50% or greater sequence identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament for the treatment or prevention of infection due to Chlamydia trachomatis. The infection is treaded or prevented by the medicament eliciting an immune response which is specific to a C. trachomatis clementary body, or for neutralising C. trachomatis elementary bodies, hence the immunogenic composition can be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions can also be used for the diagnosis of C. trachomatis infection. The nucleic acids of the immunogenic compositions compositions are therapy. The immunogenic compositions compositions are the acids of the immunogenic compositions the light of the activity. This sequence represents one of the light C. trachomatis proteins with immunogenic properties of the
New immunogenic composition having a protein or encoding nucleic acid, useful for diagnosing, preventing and/or treating Chlamydia trachomatis infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                  invention relates to a novel immunogenic composition comprising
                                                                                                                                                                                                                                                                                           Claim 6; SEQ ID NO 5; 164pp; English.

nucleic acid,

New immunogenic composition having a protein or encoding

```
The invention relates to a novel immunogenic composition comprising a protein or nucleic acid, and an adjuvant, where the protein or nucleic protein or nucleic acid comprises any of 131 fully defined amino acid or nucleotide acid comprises any of 131 fully defined amino acid or nucleotide care sequences given in the specification, or has 50% or greater sequence of identity to it, or their fragments. The protein and/or nucleic acid of the immunogenic composition is useful in the manufacture of a medicament or prevention of infection due to Chlamydia trachomatis. The infection is treated or prevented by the medicament cliciting an immune response which is specific to a C. trachomatis acides, hence the immunogenic composition can also be used for the diagnosis of C. immunogenic composition and also be used for the diagnosis of C. trachomatis infection. The nucleic acides of the immunogenic compositions can also be used for the immunogenic compositions can be used to treat disorders by gene therapy. The immunogenic compositions have antibacterial activity. This sequence represents one of the immunogenic properties of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      160
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                921
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to novel immunogenic compositions that comprise a combination of Chlamydia trachomatis (C. trachomatis) antigens. Specifically, it refers to a first antigen group consisting of PepA, LorE, ArtJ, DnaK and CT398 and a second antigen group consisting of PepA, LorE, ArtJ, DnaK and CT398, OmpH-like, L7/L12, OmcA, AtoS, CT547, Enclase, Vaccine and antibodies that recognize the development of a vaccine and antibodies that recognize the immunogenic composition in order to provide a method of neutralizing a C. trachomatis infection in a mammal through raising an immune response. Accordingly, the pharmaccutical compositions derived thereof exhibit antibacterial activity and the group of antigenic DNA sequences can also be used in antigen of the invention.

                                                                                                                                                                                                                                                                                                                                       The invention comprises an immunogenic composition for the treatment oprevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydial trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention comprises an immunogenic composition for the treatment of prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydial infection. The present amino acid NoTE: The present sequence is not shown in the specification, but was obtained from the USPTO website - sequence.
                                                                                                                                                                                                                                                                                                                                                                                        1 MetGlnThrSerPheHisLysPhePheLeuSerMetIleLeuAlaTyrSerCysCysCysCor

                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention comprises an immunogenic composition for the treatment c prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful freating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydia trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.

                     The invention comprises an immunogenic composition for the treatment of prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydia trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.

        The invention comprises an immunogenic composition for the treatment of prevention of a Chlamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful ftreating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydial trachomatis protein of the invention. NOTE: The present sequence is not shown in the specification, but was obtained from the USPTO website.
